

CUSTOMER SHOPPING ANALYSIS

Customer shopping is steady at about $60 per order

Across 3,900 transactions worth $233,081, growth depends more on order value and retention than on acquiring new buyers.

Made with GAMMA

Customer shopping is steady at about $60 per order

The business already has a loyal customer base

The growth question starts with retention, not reach.

79.9% loyal

3,116

Loyal

79.9% have more than 10 previous purchases.

701

Returning

18.0% have 2–10 previous purchases.

83

New

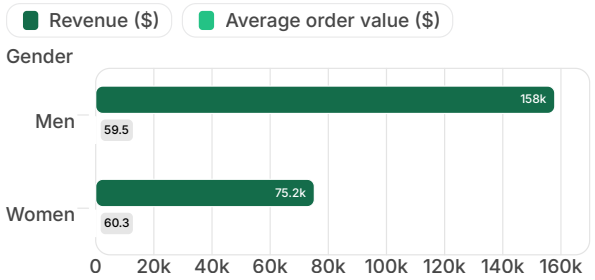

Only 2.1% are new buyers.

Made with GAMMA

Customer shopping is steady at about $60 per order

Revenue is volume-driven, not price-driven

Revenue and average order value by gender

The spend is nearly flat

Men generate $157,890, or 67.7% of revenue, largely because they are 68% of customers.

Average order value is nearly identical: $59.54 for men versus $60.25 for women.

Five actions turn the findings into growth

1. Redesign subscriptions around spend-linked perks and A/B test the offer.
2. Replace blanket discounts with targeted offers, starting with highly discounted products.
3. Convert loyal non-subscribers first; they already trust the brand.
4. Promote paid express upgrades at checkout.
5. Focus campaigns on Young Adults, Clothing and Accessories; review the Outerwear range and seasonal promotion.

Validation and limitations: findings come from one historical shopping dataset; subscription and discount effects are correlational and should be confirmed with controlled tests.

Bottom line: volume, loyalty and express spend are the levers to grow revenue.
